

GIRL GUIDES, IN YOUR POCKET!

How to create a digital painting

Materials for the painting

- iPad and charger
- iPad pencil
- Procreate program

Directions for the sunset painting:

1. Turn on the iPad and open Procreate.
2. Select the size of the 'Canvas' that you want to use.
3. Choose a reference photo by inserting a photo, then selecting recent and picking one of your recent photos.
4. Place the photo up in the top corner and make it small so that you can see it but it doesn't make painting too hard.
5. Pick a brush to paint the background, a large round brush is the best choice for this.
6. Add layers of different colours for the background starting with bright orange and gradually becoming lighter in towards the centre.
7. Next use a Gaussian blur which will then blend all the colours together to make the sunset.
8. Put the blank layer on top and paint the sun white again.
9. Then select black and paint in the foreground (In front of the sun).
10. Now you can be artistic with the details, for example by adding some trees or birds.
