

EXTRA PROGRAM IDEAS

Mini Tripods

You will need:

- 3 pencils, chopsticks, small sticks, or something similar
- 2 pieces of string

Instructions:

1. Form the tripod base using the [instructions from the Hub](#) (Steps 1-5) or watch GGTV Episode 9.
2. Instead of using smaller sticks to stabilise the tripod at the base, we use string for this mini tripod. Take the extra piece of string and using one end of the string, tie a clove hitch on to one leg of your tripod.
3. Pull the short end tight and tie a second clove hitch on the second leg. The string should remain taut. Adjust your clove hitches if you need to in order to increase tension.
4. Tie another clove hitch on the third leg, and once again adjust clove hitches to make sure the string is taut.
5. Return the string to the first leg, and tie off using another clove hitch.

What could you use a mini tripod for? What could you do with two or three?

Clove Hitch:
