

Egg Parachute

You will need:

- Eggs (one per person or group)
- Scissors
- String
- Recycled materials (e.g. paper, cardboard egg carton)

Challenge: Build a parachute and cradle for an egg so when it is dropped from a height, it does not break or crack!

One rule: No materials are allowed to be *underneath* your egg!

From standing height or safely standing on a chair (preferably outside), drop the egg. Did your parachute protect your egg?

The aim is for the parachute component to engage, and reduce the impact between the egg and the ground.
