

How to Set up a Tent

You will need:

- Tent
- Tent pegs
- Mallet
- Another set of hands!

Instructions:

1. Select a large flat area to put up your tent. Make sure it's not near any overhanging tree branches.
2. Clear the area of sticks and rocks.
3. Take the tent out of the bag.
4. Unroll and unfold the tent and the fly. Lay the tent out on the ground where you would like it to be.
5. Take the poles out of the bag, and put them together.
6. **Each tent is different!** Most tents require you to put up the main part of the tent first with the poles to hold it up, and then put the fly over the top.
7. When hammering in the tent pegs, have the peg at a 45 degree angle!
8. Peg around the base first, and then the sides and doors.
9. Finish by pegging out the guy ropes. These are what helps keep your tent standing even if it's windy!
